1. Introduction

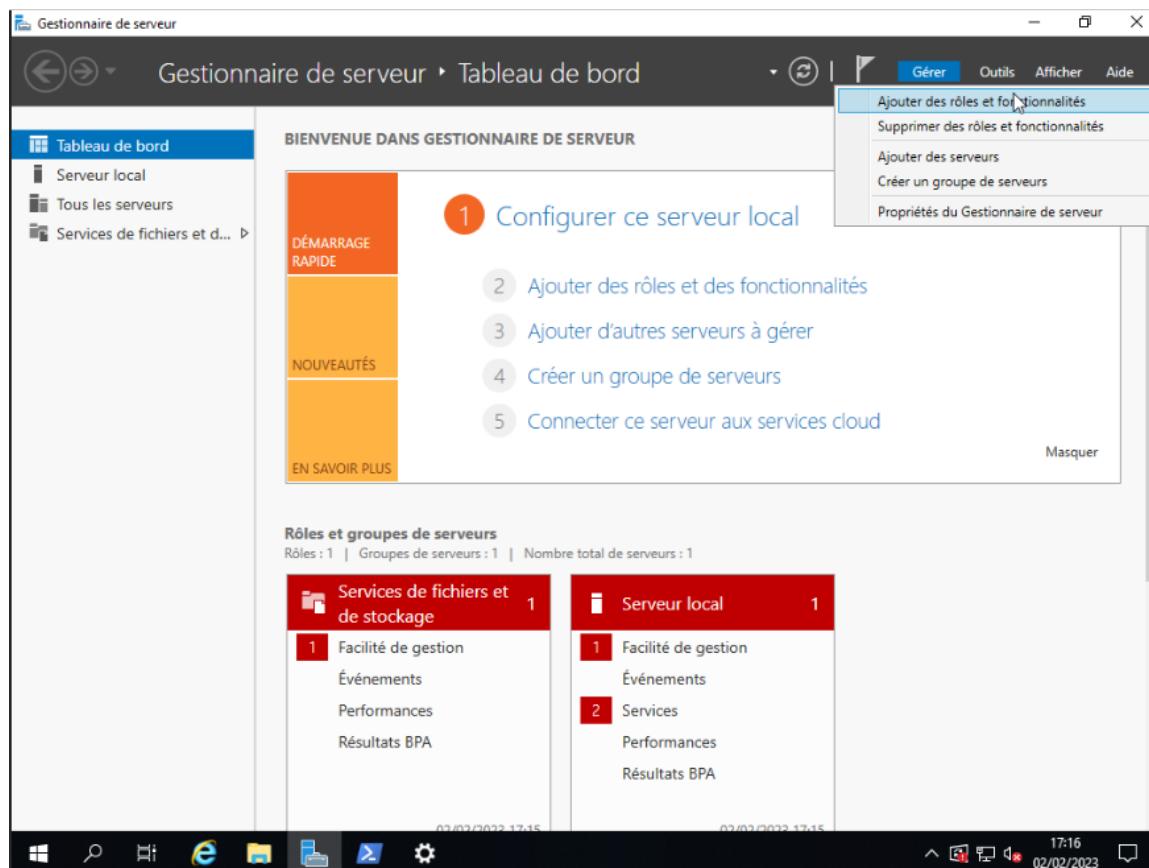

Un serveur Active Directory est un service de gestion des identités et des ressources réseau développé par Microsoft. Il fait partie intégrante du système d'exploitation Windows Server et permet de centraliser et de gérer l'authentification, l'autorisation et la gestion des objets du réseau tels que les utilisateurs, les ordinateurs, les groupes et les ressources partagées.

2. Crédit à la création du serveur Active Directory

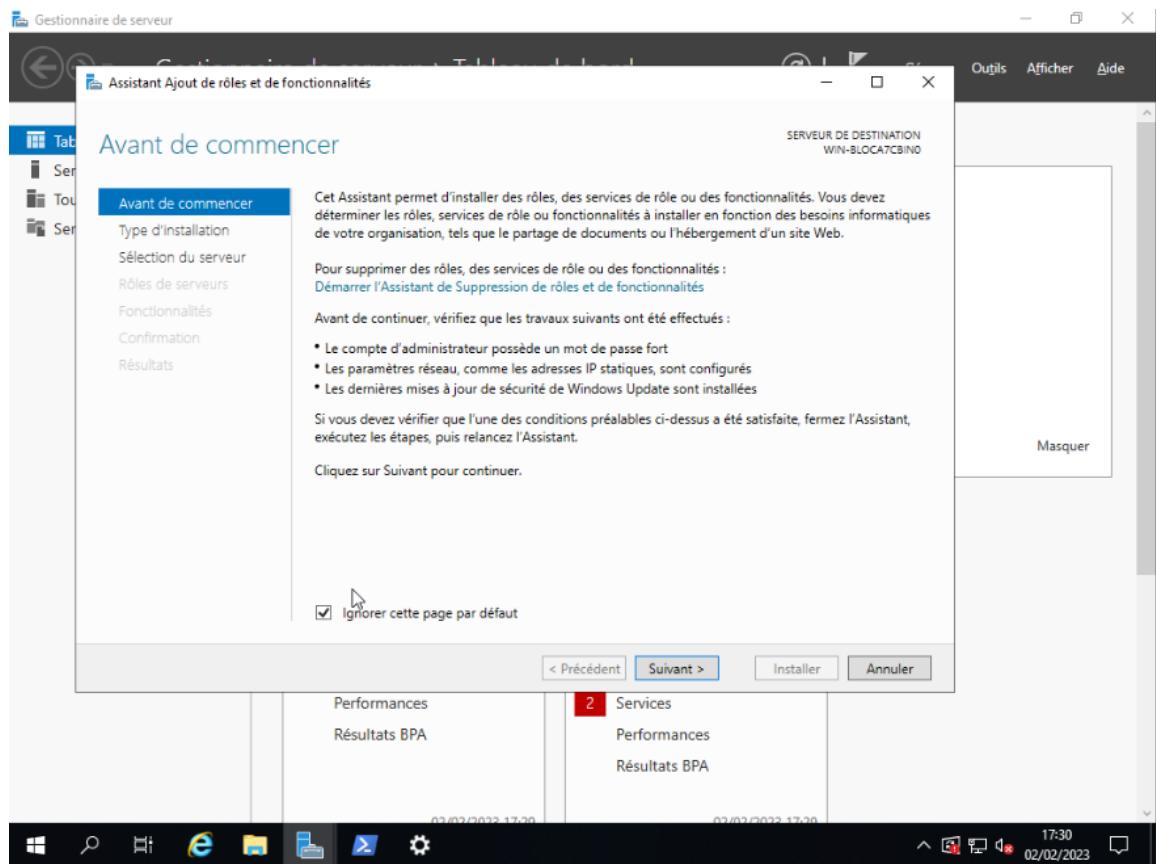

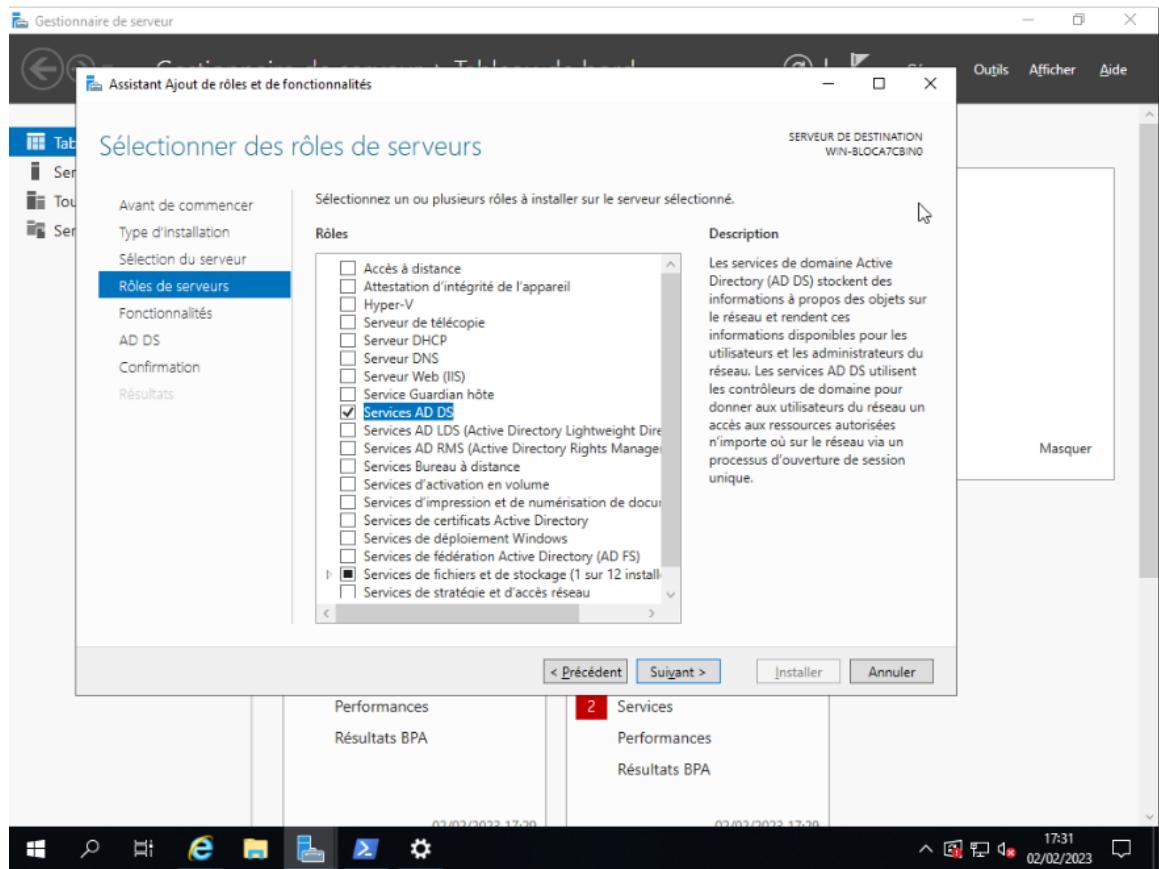

Nous commençons par installer Windows Server 2019

Nous choisissons la version avec environnement de bureau

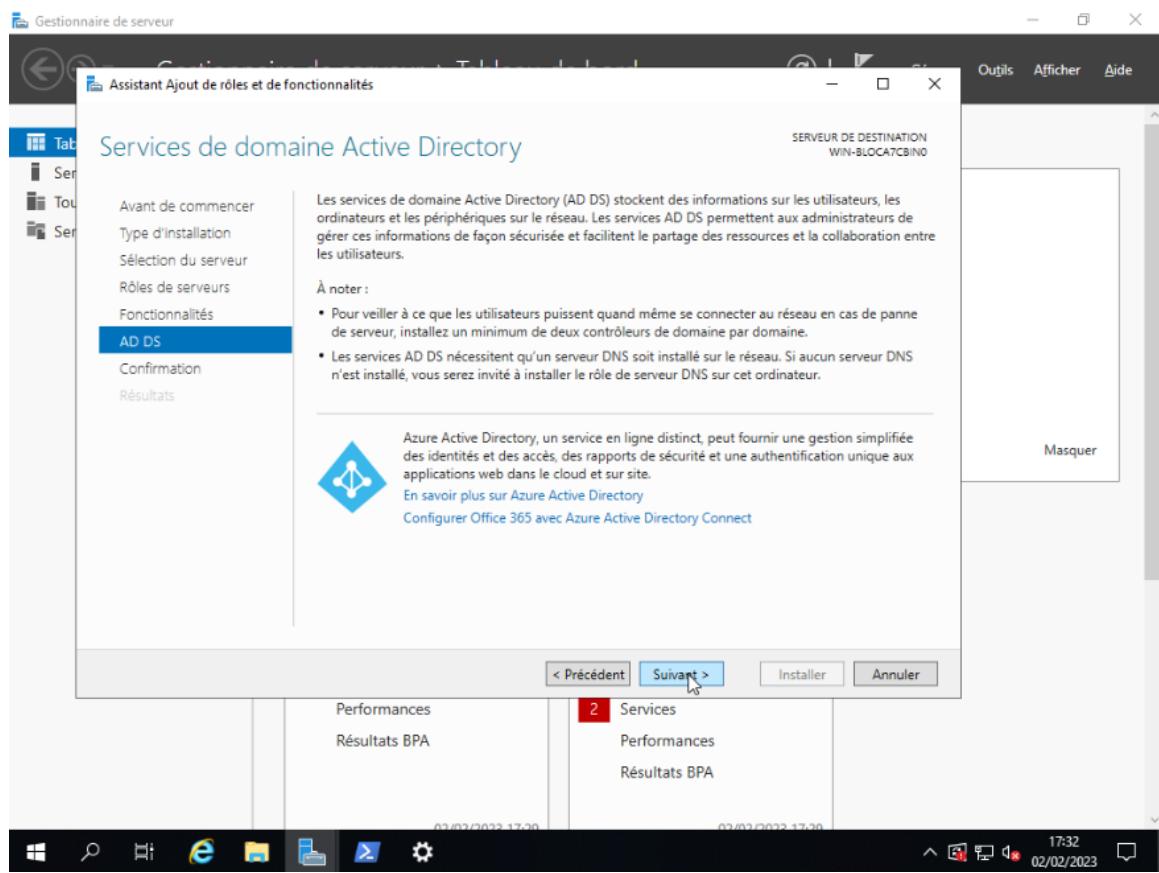

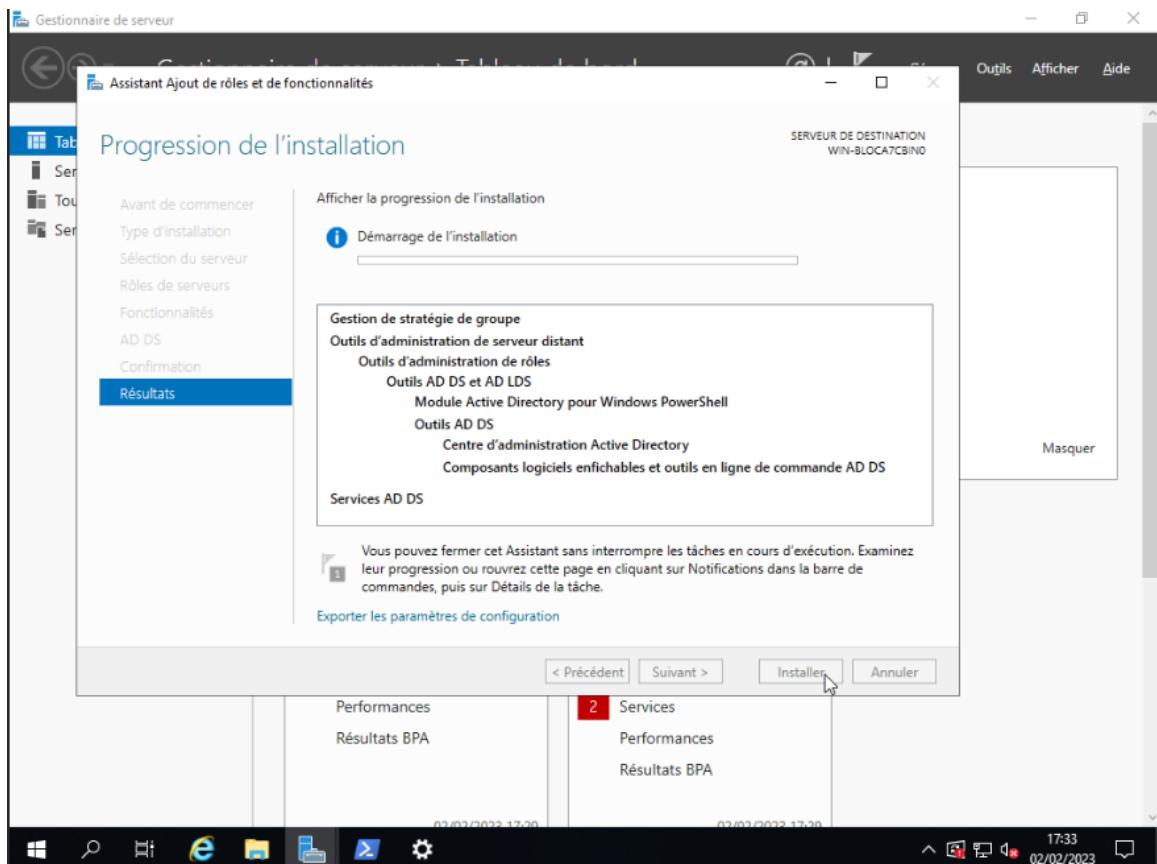

Nous cliquons sur "Ajouter des rôles et fonctionnalités"

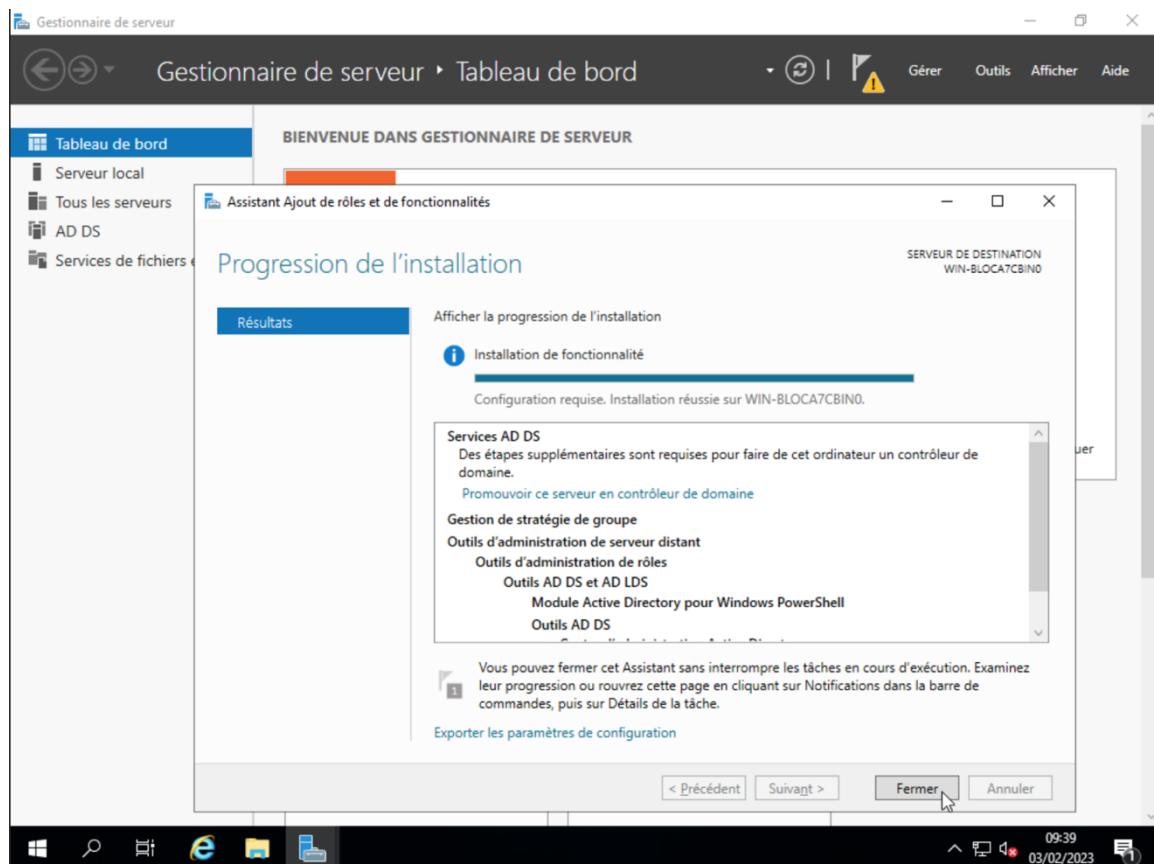

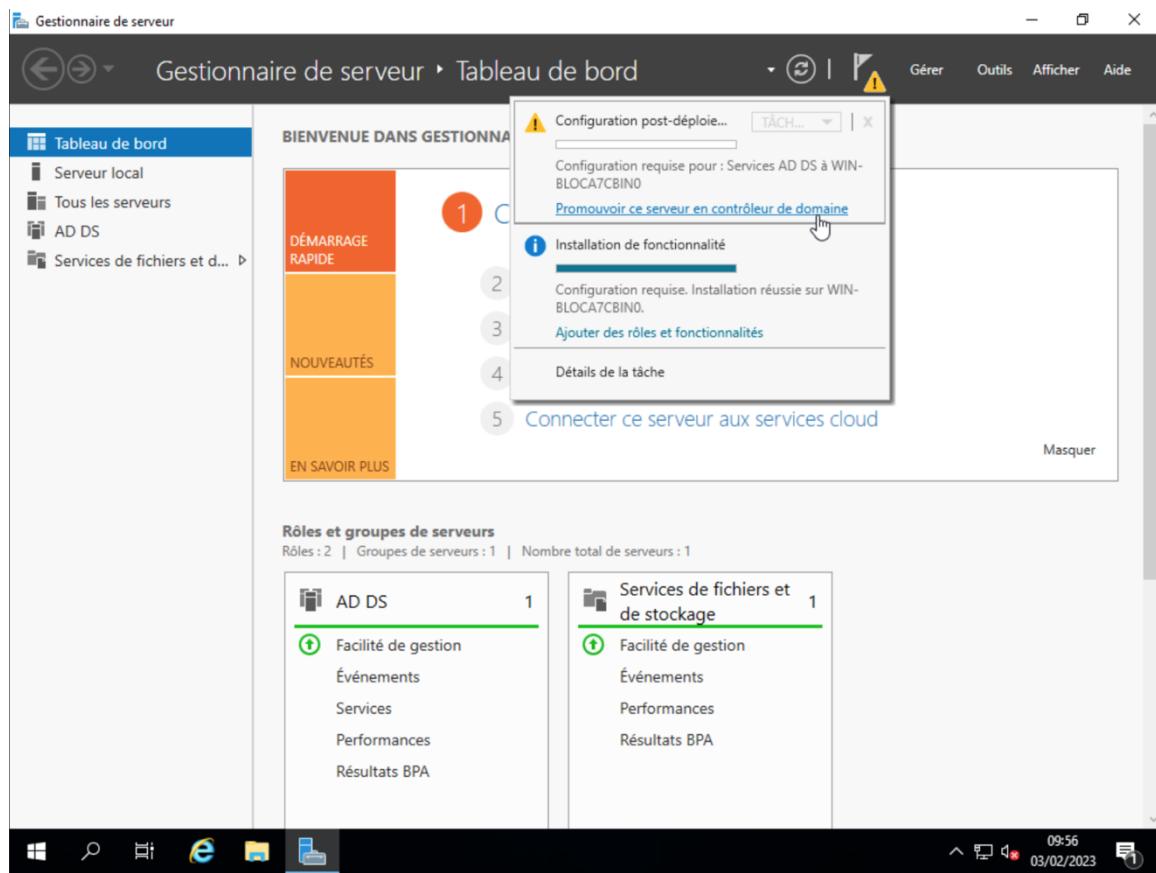

Sélectionnons la fonctionnalité AD DS

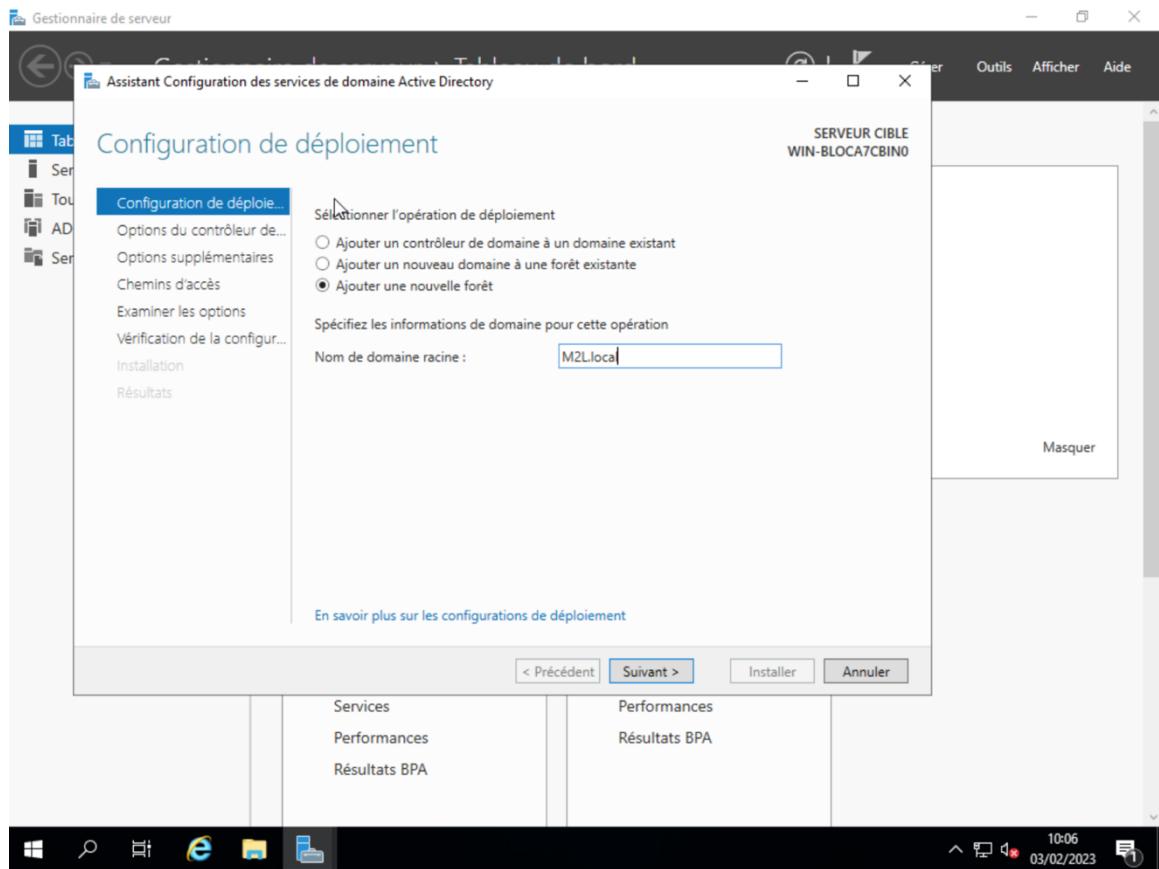

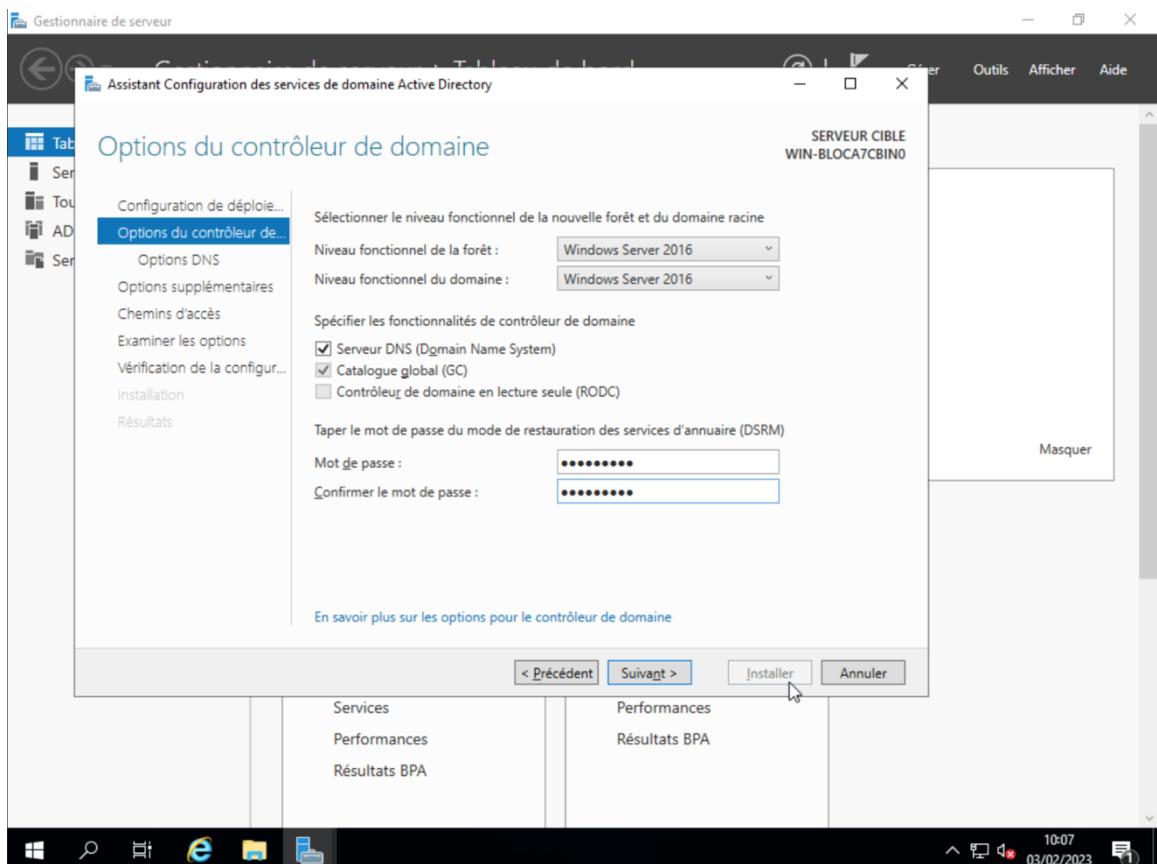

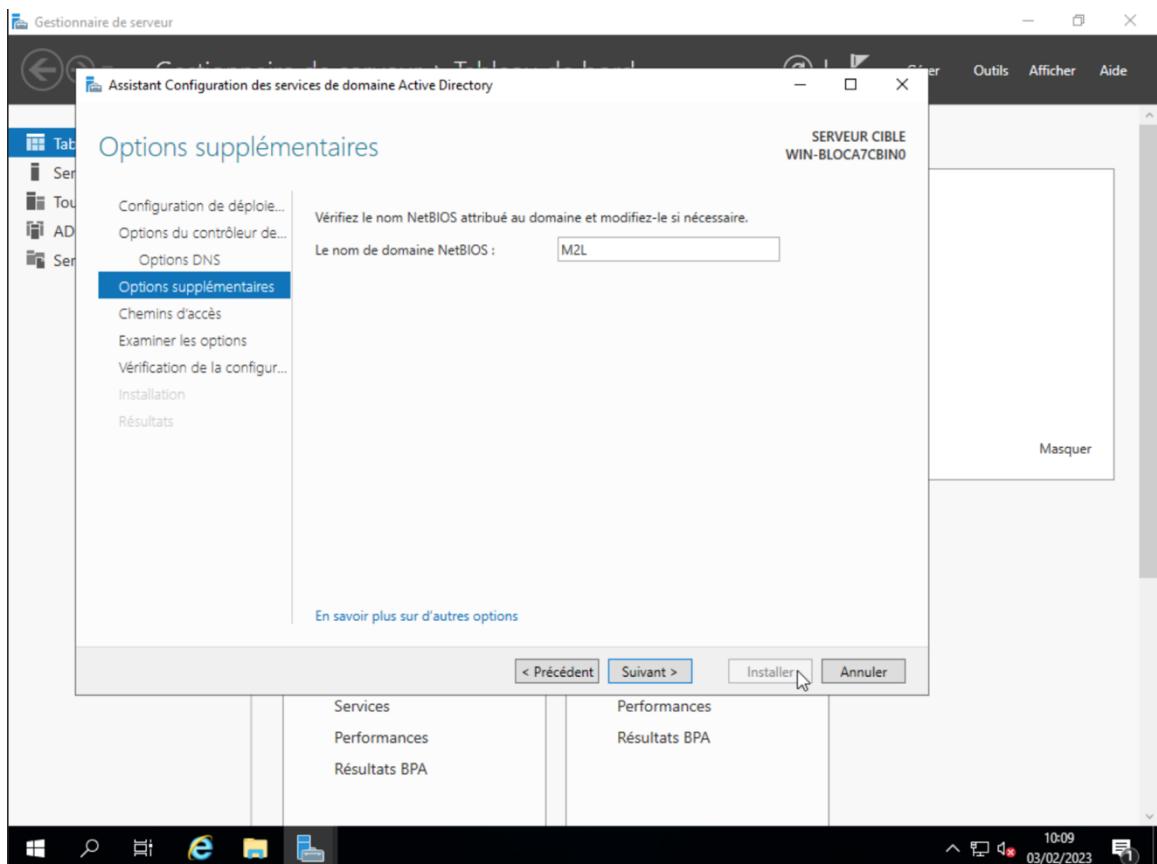

Une fois l'installation terminée nous pouvons fermer la fenêtre

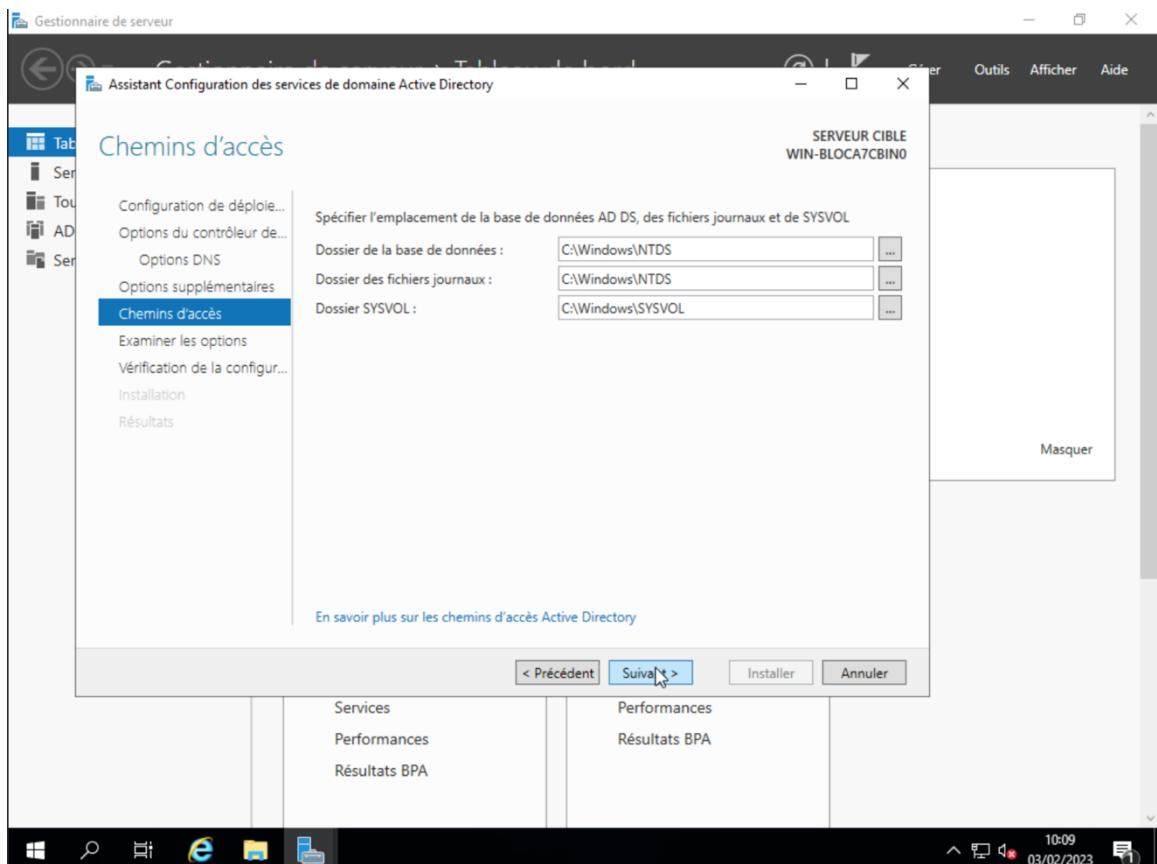

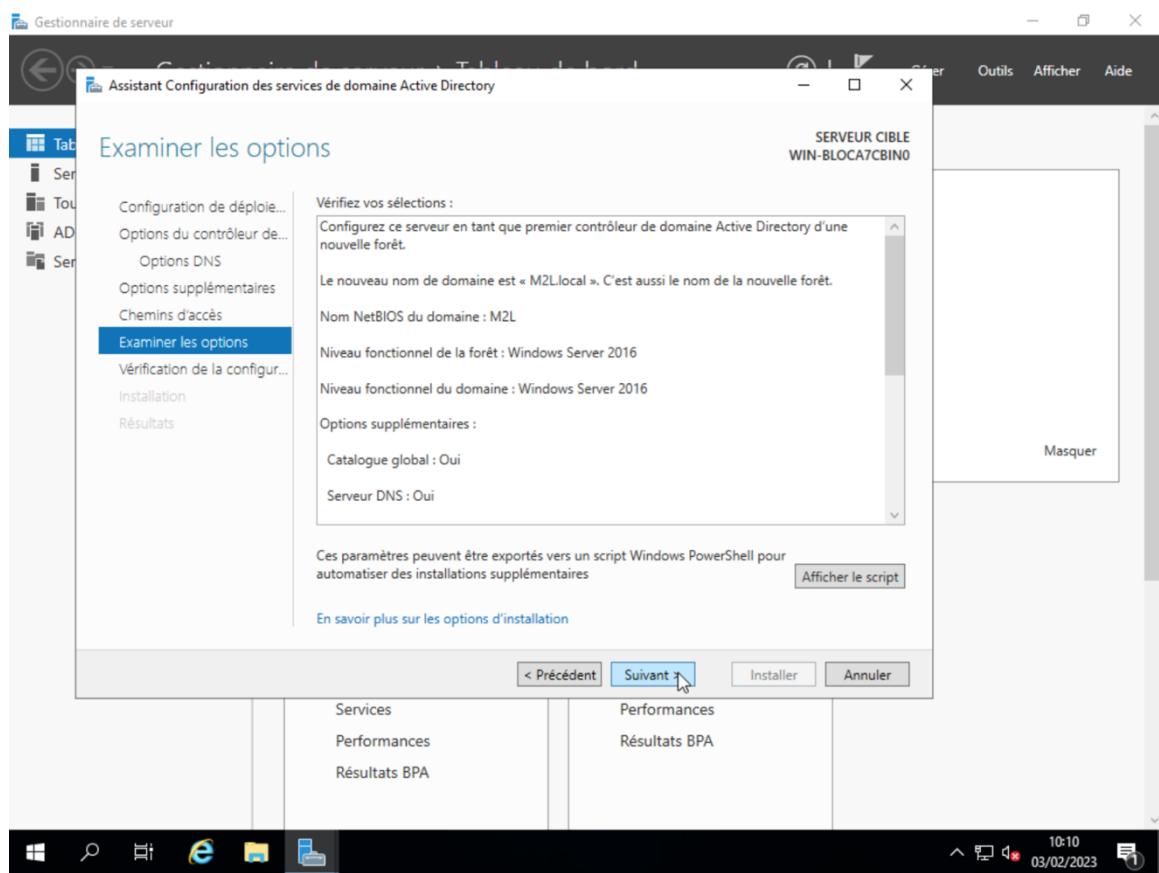

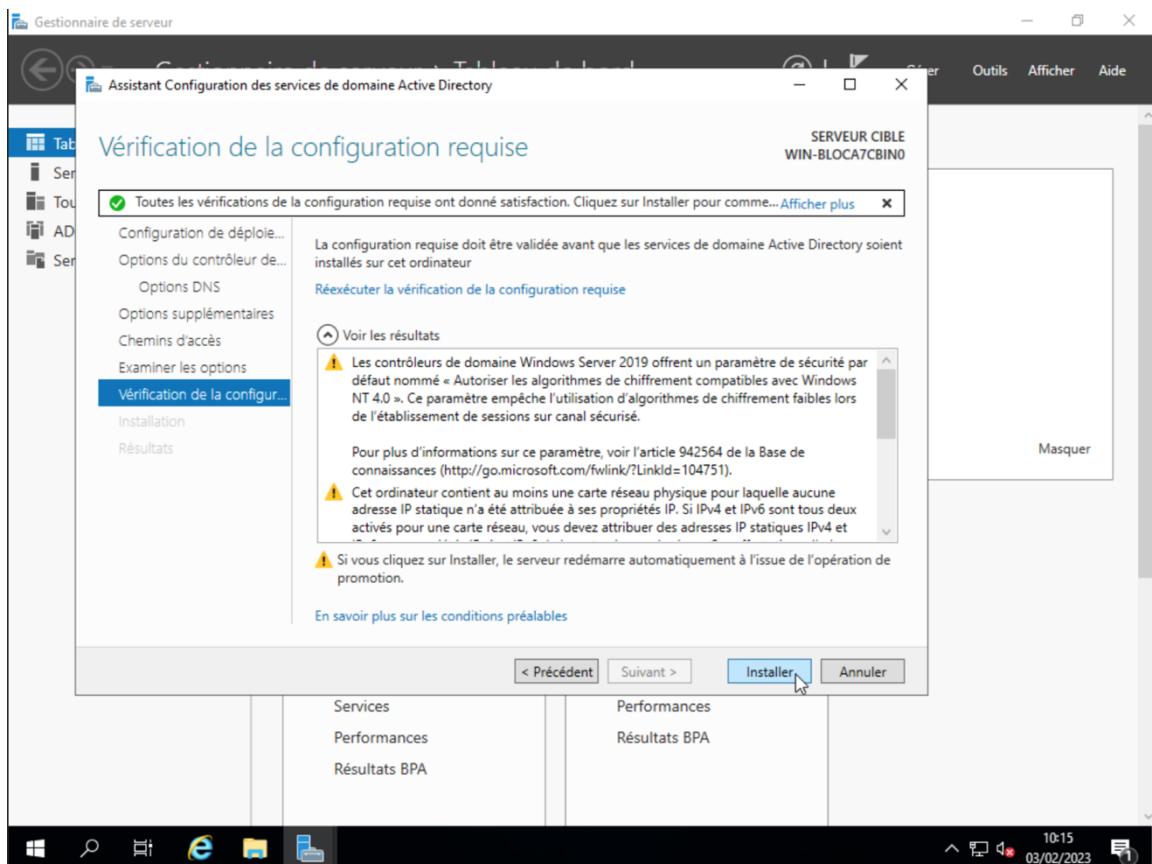

Nous renseignons le nom du domaine

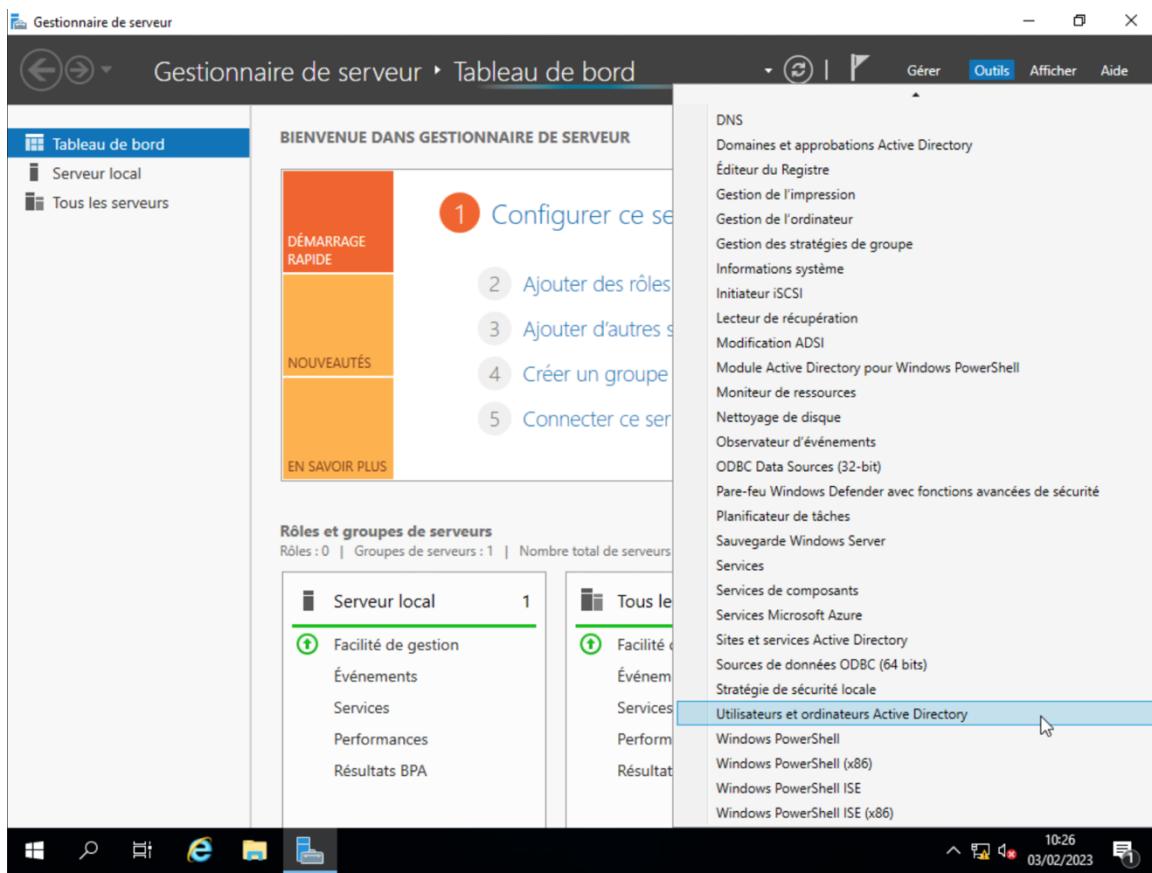

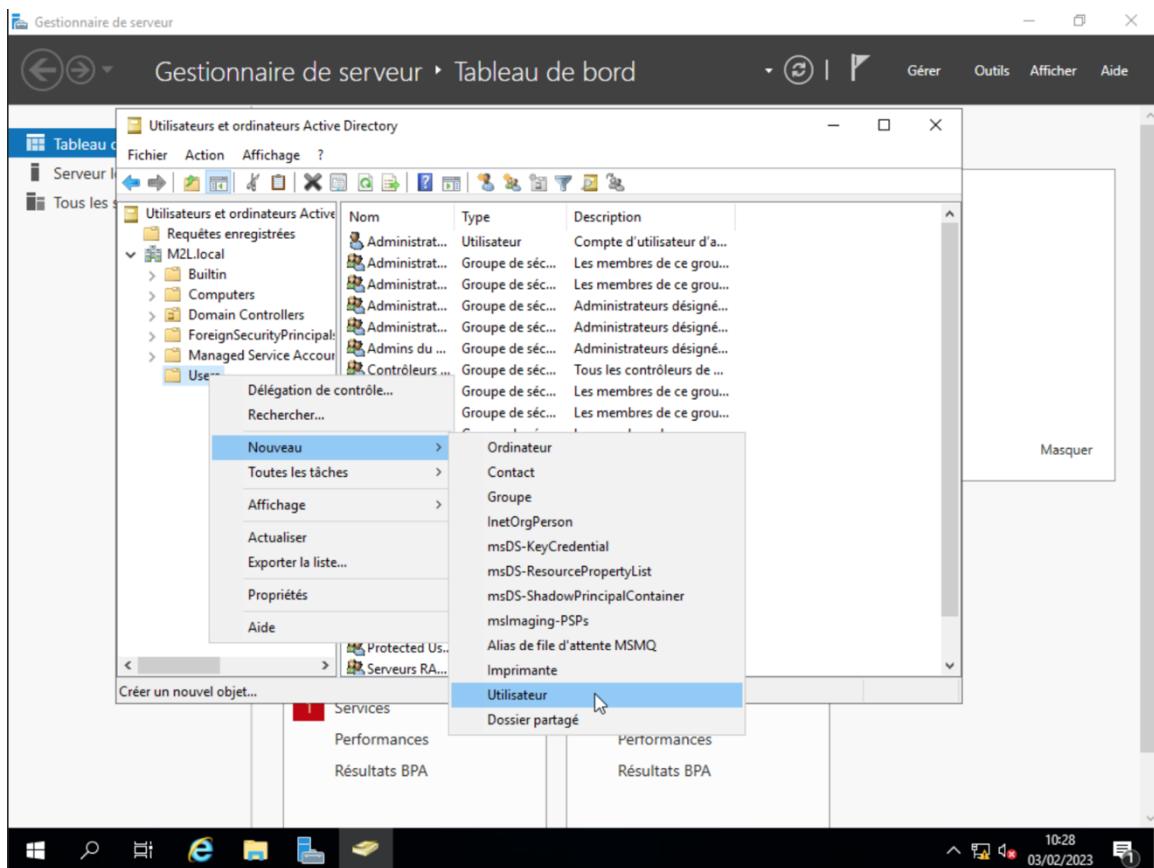

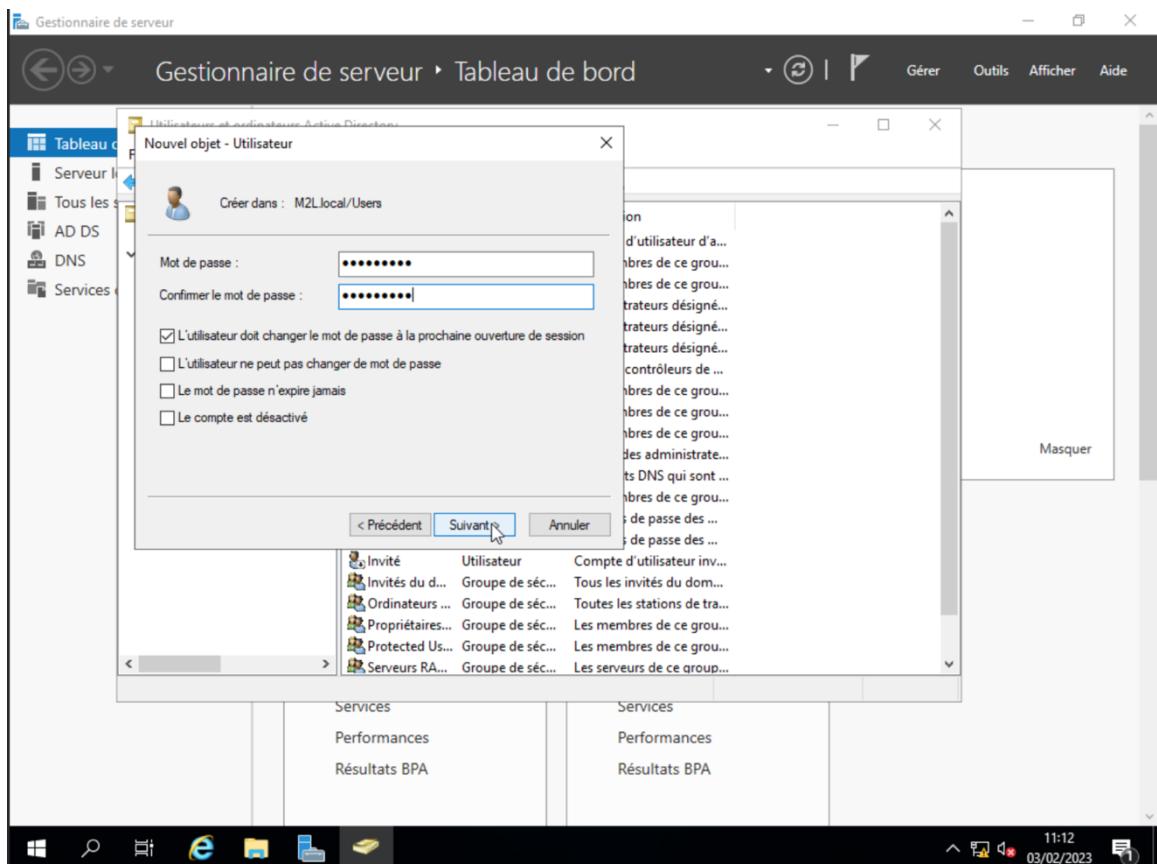

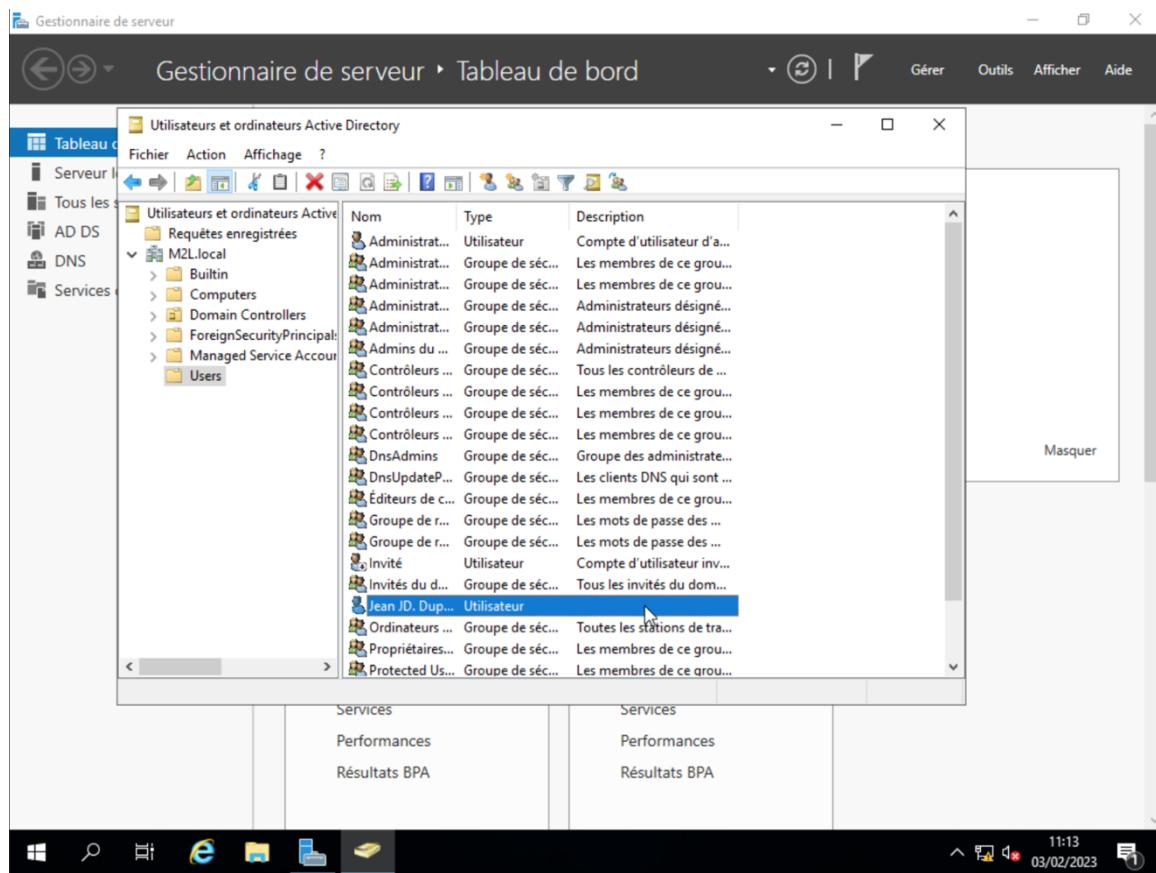

Une fois l'installation terminée nous pouvons fermer la fenêtre

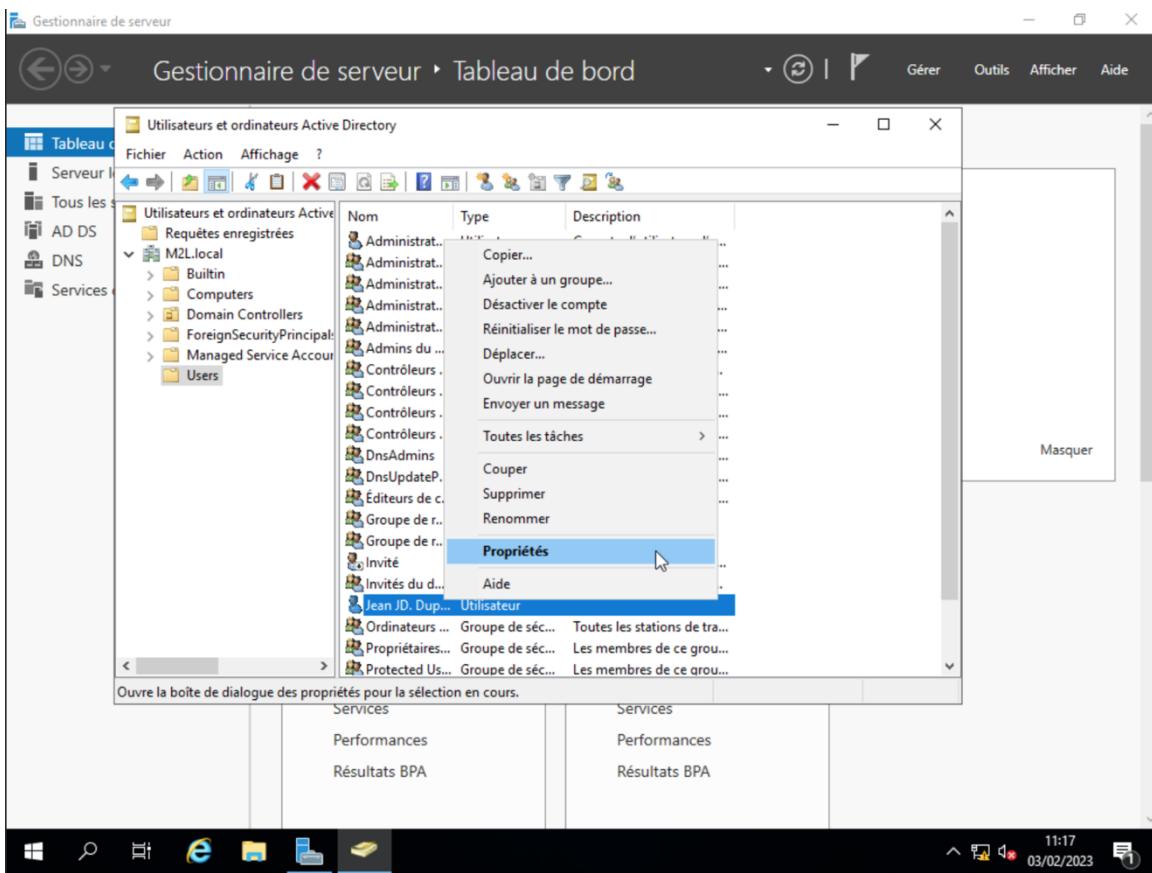

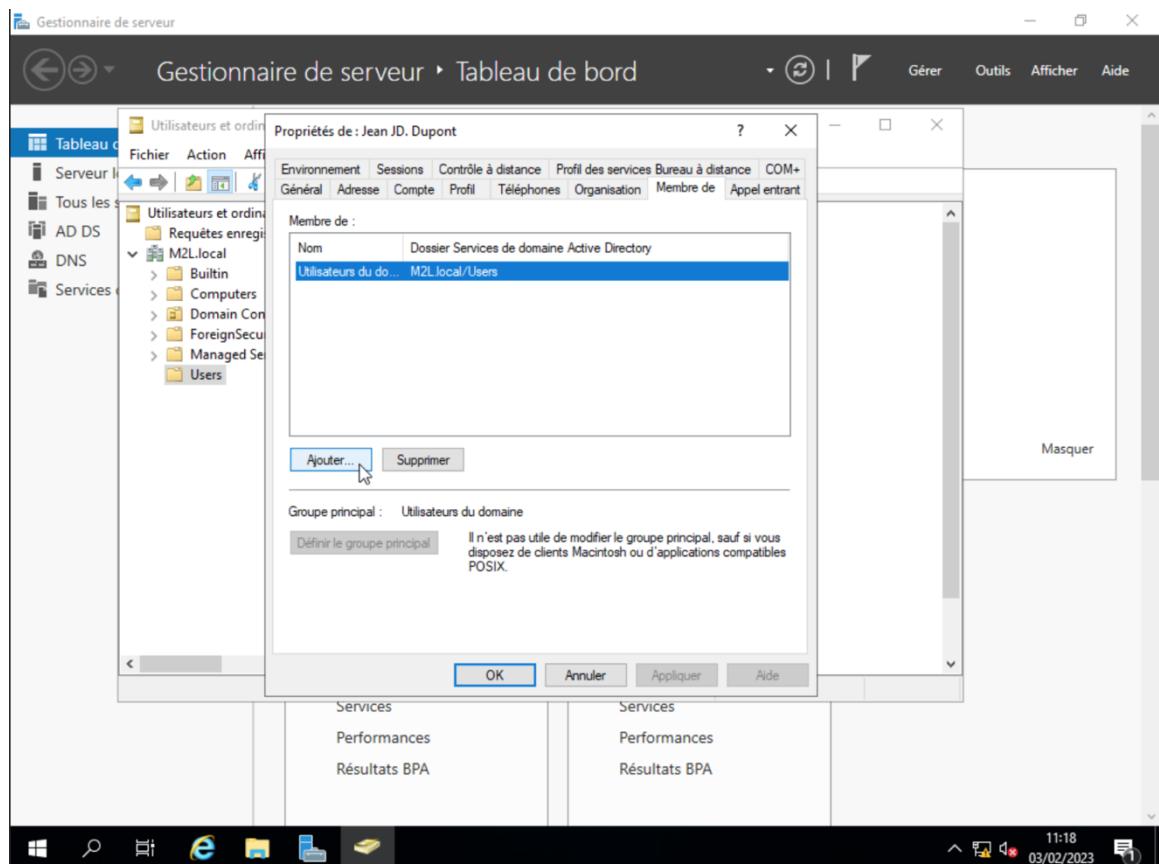

3. Crédation des utilisateurs

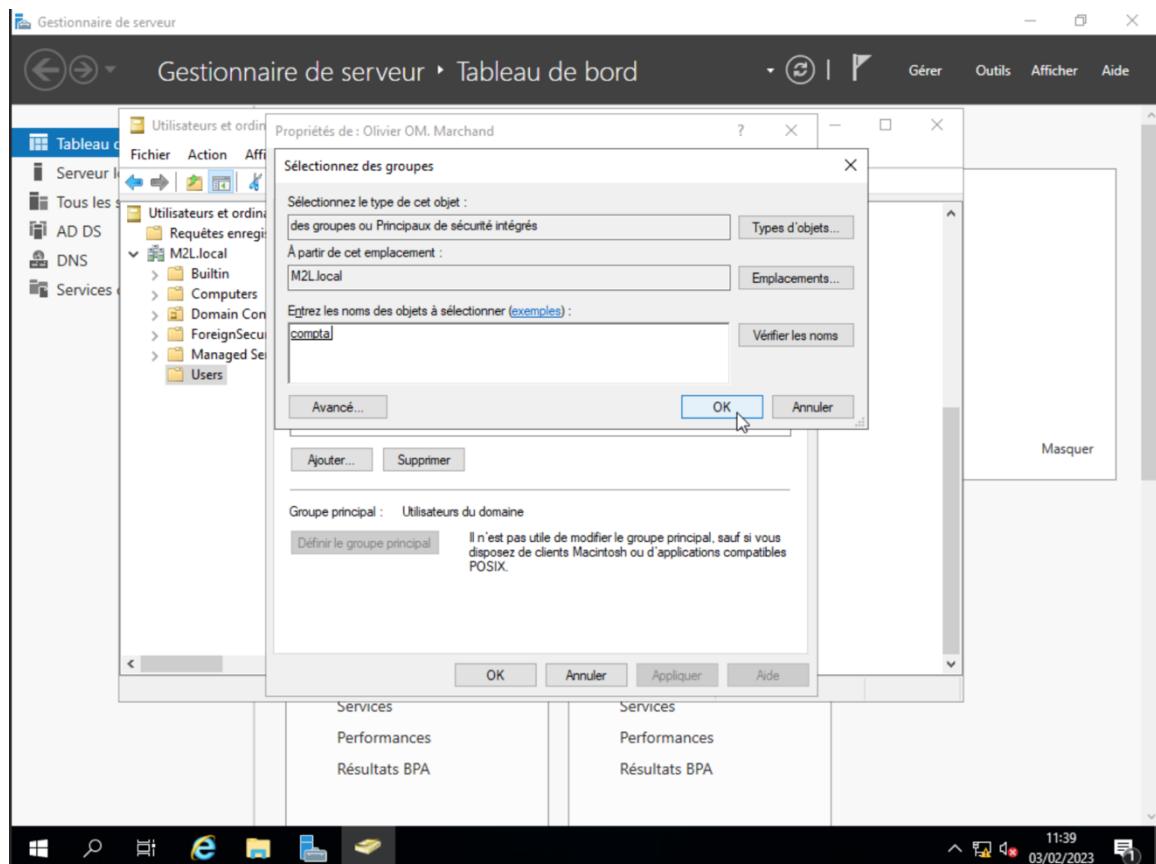

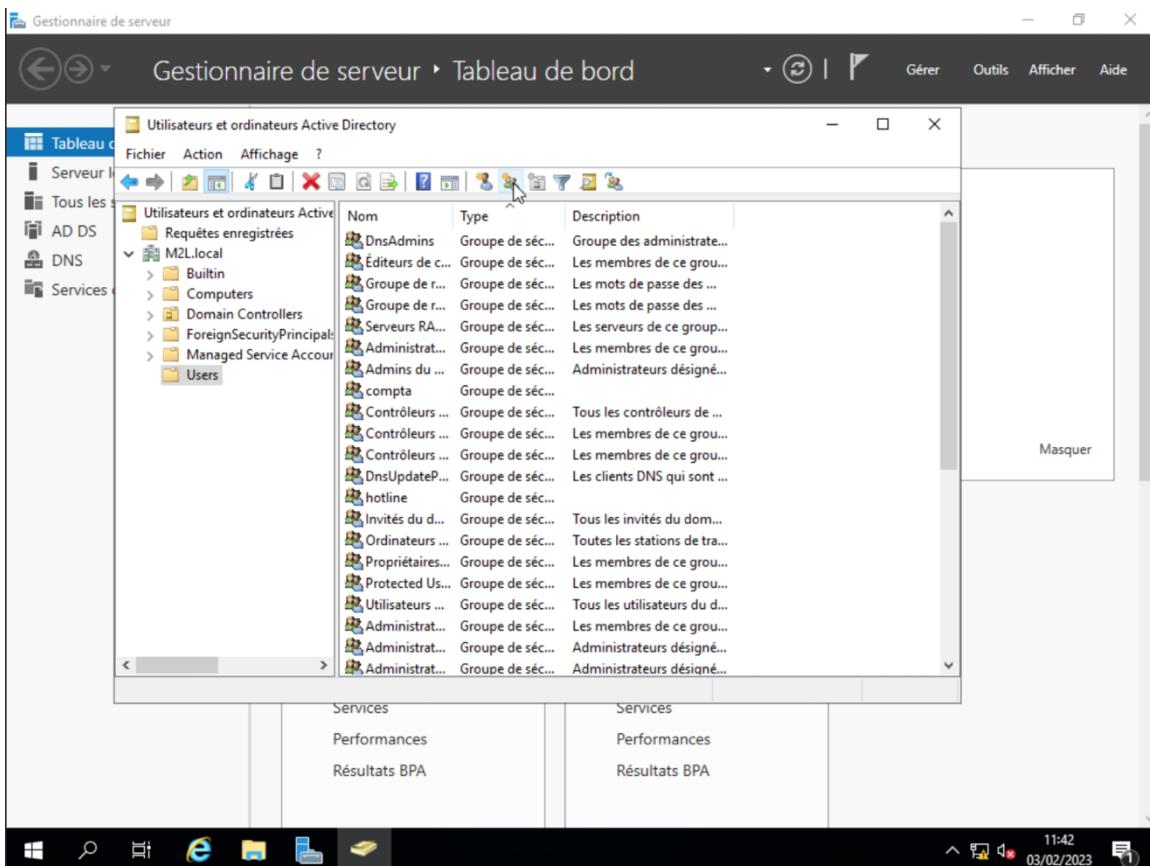

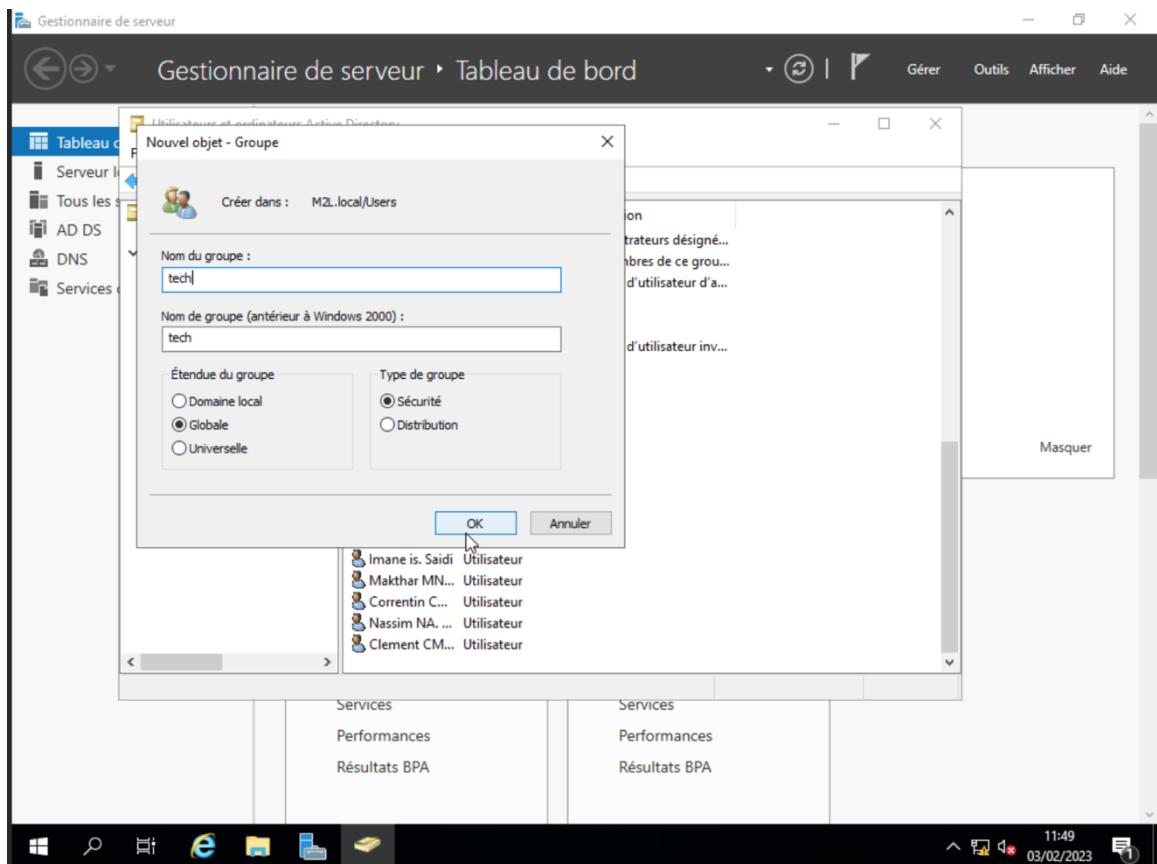

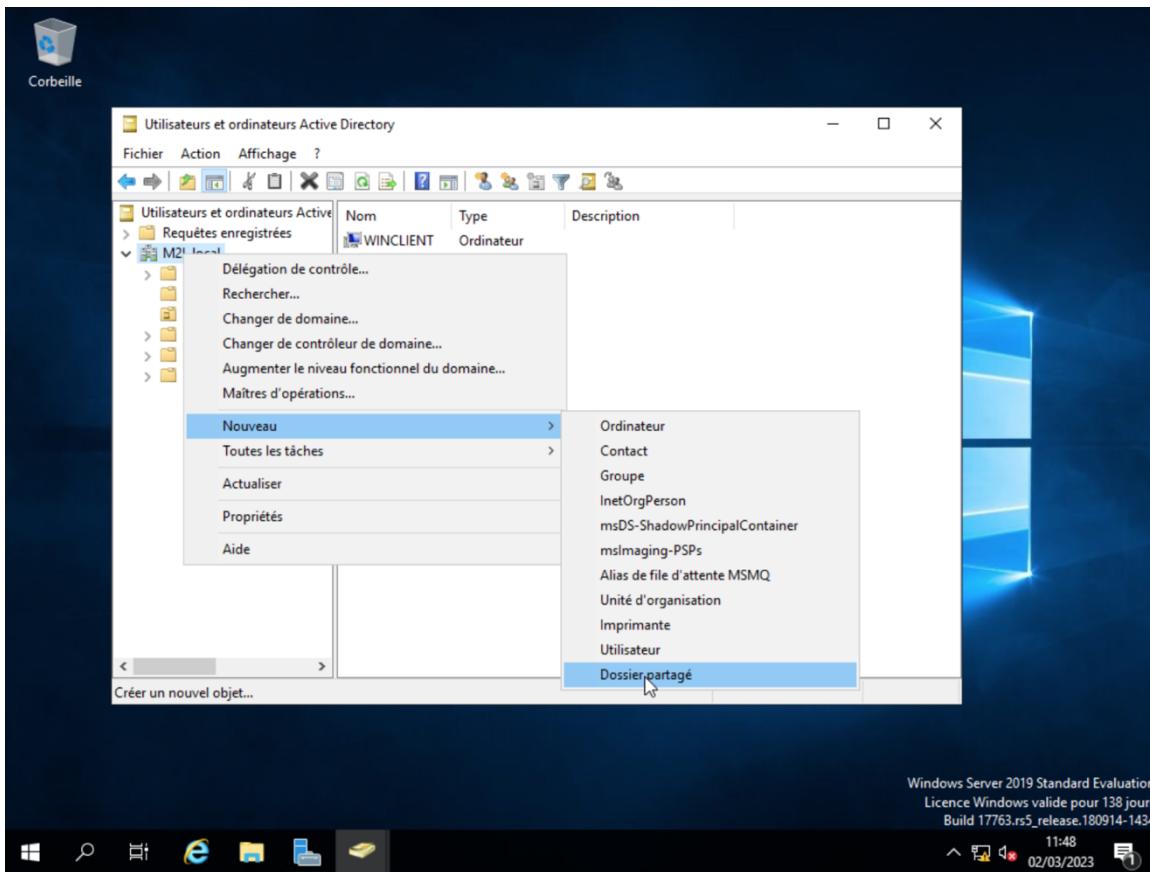

4. Crédit des groupes

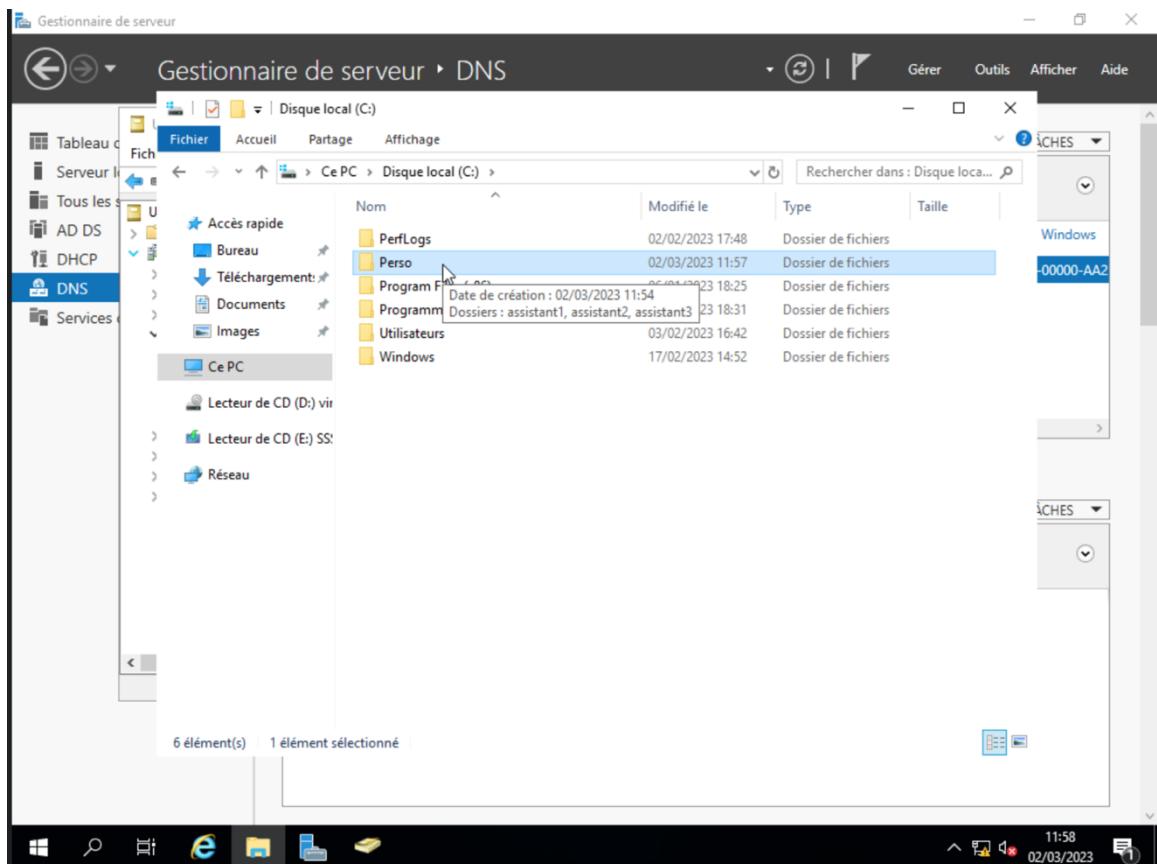

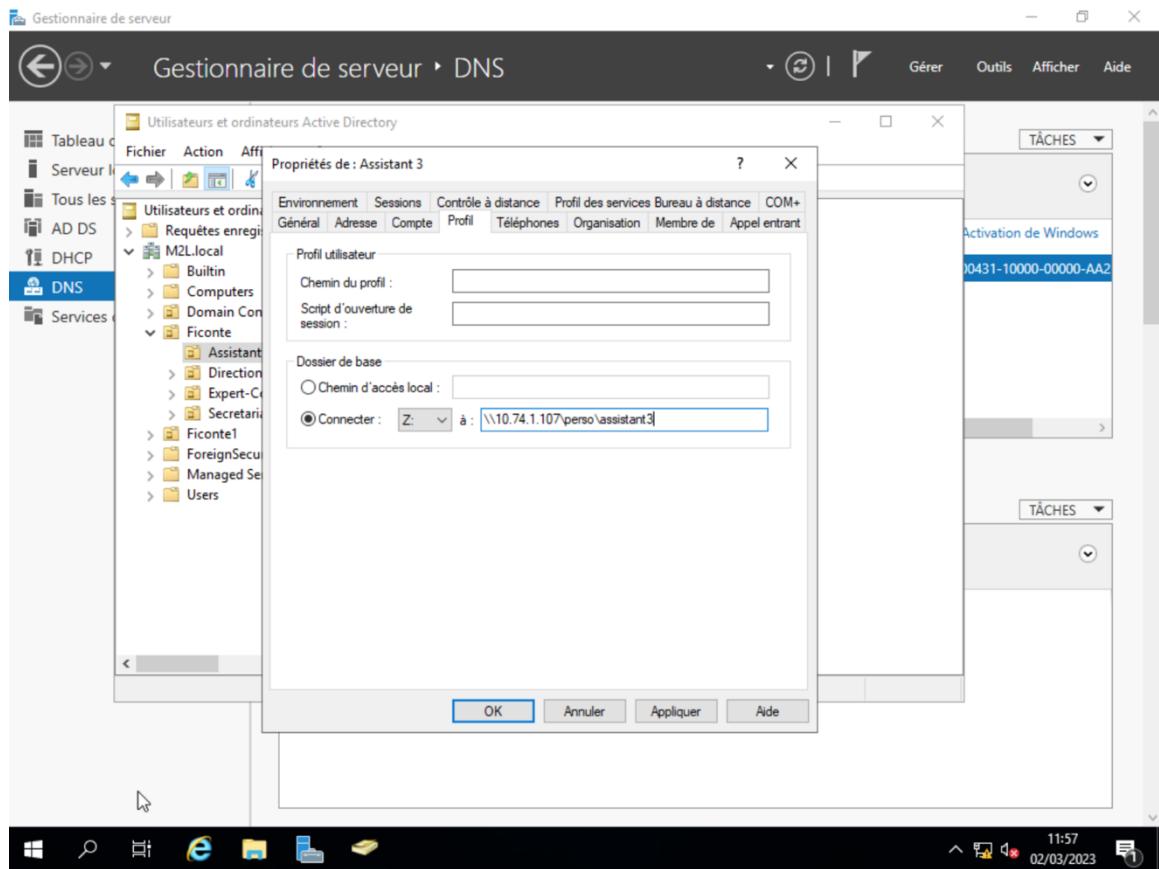

5. Crédation d'un dossier partagé

Nous cliquons sur nouveau puis dossier partagé.

Nous créons notre dossier partagé.

Nous créons ensuite les dossiers personnels des utilisateurs dans ce dossier.
